chado

Generic model organism database schema

Presented at the NESCent GMOD Meeting
20 January, 2005
David Emmert
emmert@morgan.harvard.edu

Chado modules

Genetics Module	Genetic/phenotypic interactions in genotypic/environmental context
Sequence Module	Biological sequences and objects which can be localized on them
Map Module	Adjunct to sequence module for non-sequence localization
Expression Module	Transcript and protein expression events
Companalysis Module	Adjunct to sequence module for in-silico analysis
CV Module	Controlled vocabularies and ontologies
Organism Module	Taxonomy / species information
Pub Module	Publication / Biblio / Reference information
General Module	General information / database cross-references

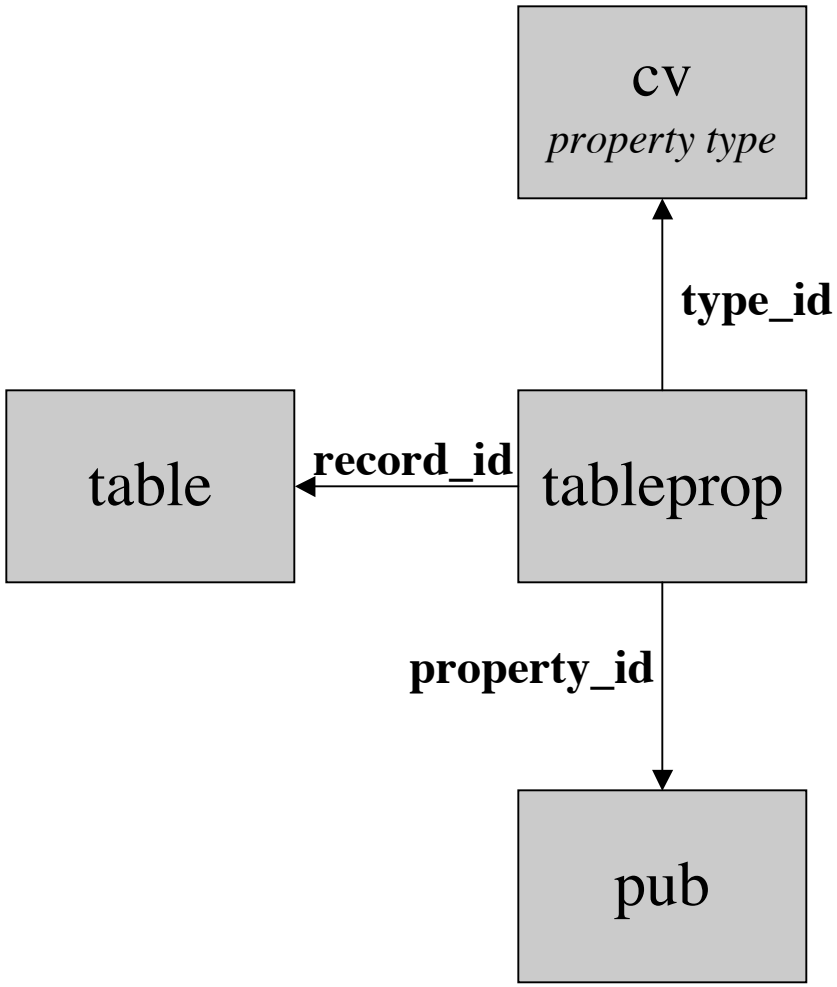
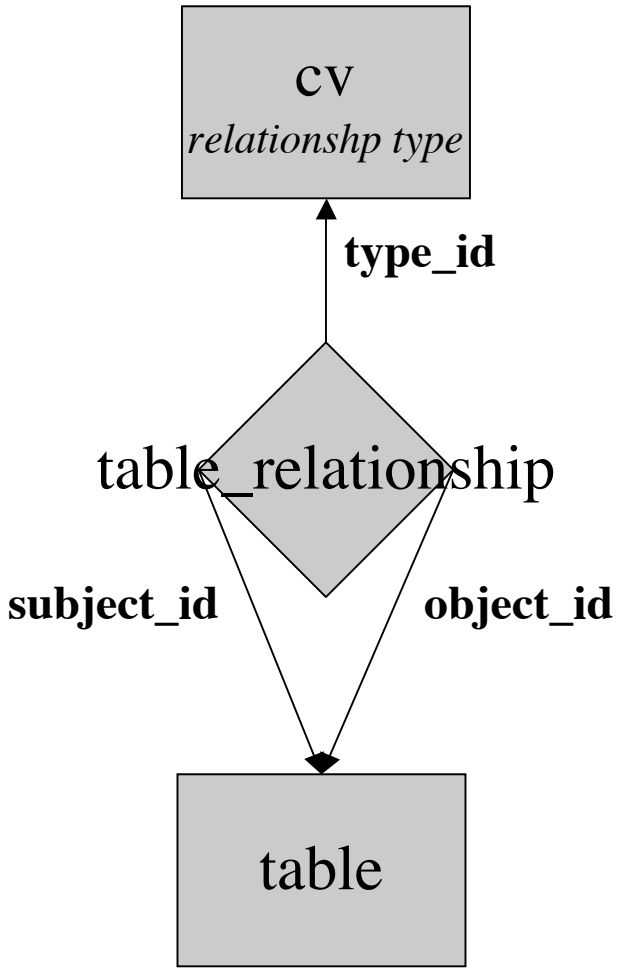
flexible property types

- push as many attributes as possible into property tables
- control property types with controlled vocabs
- link properties to publications



flexible relationship types

- using controlled vocabularies for relationship types makes customization and extension possible without altering the schema.



Acknowledgements

- Bill Gelbart, FlyBase PI
- chado schema design
  - Chris Mungall (HHMI/BDGP/FlyBase)
  - Colin Wiel (FlyBase)
  - Pinglei Zhou (FlyBase)
  - Aubrey de Gray (FlyBase)
  - Bill Gelbart (FlyBase)
  - Stan Letovsky (FlyBase)
- chado I/O
  - chadoXML & chado loader
    - Pinglei Zhou and Stan Letovsky
  - Bioperl chadoxml.pm
    - Peili Zhang and Chris Mungall
  - GAME -> chadoXML converter
    - Frank Smutniak
  - GFF3 -> chado loader
